### The Art of Improvisation .... Or the Alternative Use for Ballistic Vehicle Windscreens

It has to be said that sometimes, there is nothing else to do except improvise. It's the art of taking whatever resources that are easily accessible to you and simply making your desired end result work.

Sure, its not the perfect fit, but then again, every experienced project manager and advisor knows that you can plan a course of action with all the best intent ..... and then it all starts to go pear shape.

So you can throw up your hands and scratch your head or simply get back to work and figure out the best way to achieve the end game.

This photo shows a great example of this philosophy.

On a recent trip to the Kurdistan region, former Australian MP Wyatt Roy visited with a Peshmerga army commander. Note the very clever use of a ballistic vehicle windscreen. I'm sure the ballistic windscreen OEM never considered their product was going to end up being used as a protection for a foxhole of sorts.

It only goes to show with a little ingenuity and lateral thinking, you really can achieve good end results. Noting of course, that when it comes to ballistic protection, no matter how you much you want, or can, improvise, you still need to develop a capability that fit is for purpose.

If you are looking for creative solutions for your current or protective civilian armoured vehicle fleet, please do not hesitate to contact me at [rob@armouredconsulting.com](mailto:rob@armouredconsulting.com)
